

EyeCandyCustomzus.com

Hello.

Eye Candy Pigments are mica pigments, which are powders which are typically used as an additive or colorant in applications such as Epoxy, Resin, Lacquer, Automotive Paints, Acrylics, Soap Molds, Art, and Cosmetics, just to name a few. Our pigments are NON-TOXIC, animal friendly, irritant, stain free, and most importantly gentle and safe to your skin. The desire for pigments in these industries are limitless, as Eye Candy pigments are proving to be the perfect solution for those Do-It-Yourselfers looking for a VERY cost effective way to customize their projects.

At Eye Candy™ our vision is to create a better everyday experience for the many people who use our products. Our business idea supports this vision by offering the best possible service, selection, quality, and value."

Eye Candy Pigments were originally being used within the automotive paint industry as an additive for paint shops looking for alternative customization at an affordable price. This concept proved extremely successful and before long our growth and popularity crossed over into the construction and craft industry markets. Whether you're a "DIY'er" or a business, an artist, woodworker, cosmetologist, soap maker, or automotive painter, we assure you that we have your best interests in mind when it comes to our pigments and your projects.

Did You Know...

The word 'Mica' originated in the Latin language and literally means 'Crumb'.

The mica rock is crushed and processed through various stages until it takes the form of, well, little crumbs. Just in case you were wondering!

What's the Use?...

Here are just a handful of ideas that we have come to find Eye Candy Pigments are being used for! Perhaps you can share with us your ideas as they come...

- ✓ Automotive Paint
- ✓ Wood-working Pens
- ✓ Flooring
- ✓ Arts
- ✓ Crafting
- ✓ Nail Polish
- ✓ Cosmetics
- ✓ Plastics
- ✓ Slime
- ✓ Lotions
- ✓ Creams
- ✓ Latex
- ✓ Soap Colorant
- ✓ Lip Balm
- ✓ Acrylic
- ✓ Candle Making
- ✓ Counter Tops
- ✓ Screen Printing
- ✓ Bath Bombs
- ✓ Jewelry
- ...AND MORE

ULTRA-FINE PURITY – Eye Candy mica pigments range in various sizes. Most of our pigments are 10-60 microns in size, which allows a better blend in the applications listed above. BUT, some of our top selling pigments range up to 700 microns when you're looking for that extra flare.

ULTIMATE CRAFTING VERSALITY – Our mica powders can be used for tinting, darkening, or brightening other mica colors making it ideal for use as a personal or professional colorant as thousands of our customers can attest to.

Yes, this car was done with Eye Candy Pigments...

Our good friends at
[#Twotrailswoodworking](#)

have taken advantage of
our pigments when creating
beautiful pens for the world
to share!

Creativity, imagination and
the right blend of colors...
have produced multitudes of
amazing writing utensils!

A close-up photograph of a person's hands applying a dark, viscous pigment to a wooden surface. The person is wearing a dark blue long-sleeved shirt. They are holding a small metal cup filled with the pigment in their left hand and using a brush with a dark handle in their right hand to apply the pigment to the wood. The wood has a natural grain and is showing some of the pigment already applied. The background is blurred, showing more of the wooden surface and some other materials.

Did You Know...

- That most of our pigments have a heat tolerance that ranges from 390 – 1800 Fahrenheit (200 to 1000 Celcius)?

Now that's hot! And... it withstands nearly all projects you may have.

Question or commets? Just let us know!

How's it Packaged?

Many people are curious as to what they will receive in the mail when ordering our pigments! No problem, we're here to help fill you in.

In most cases, when ordered online, you will purchase the pigments in 50 gram jars. The jars come packaged securely and are delivered directly to you. If you order sample kits, you will receive 25 gram baggies of pigments.

The baggies are also used to display and purchase within our friendly and ever-growing retail community. Keep an eye our for the growth of this:)

Talk about Color!

Mica pigments have been around for centuries. Made from the actual mica pigments from the earth, they are chemically colored for light fastness! Meaning, the pearlescent and iridescent colors are transparent pigments allowing light to reflect and refract creating depth with a pearlized effect. Therefore, the amount of Eye Candy Pigment added within the clear base, determines the density or thickness and vibrancy of the effect desired by the one applying it. More pearl, more color!

Solids.

These are not all the colors that we offer! Please visit us on line at EyeCandyCustomzus.com for more color options.

Looking for a simple color?

Ghosts.

These are not all the colors that we offer! Please visit us on line at EyeCandyCustomzus.com for more color options.

White based pigments with color!

The base color underneath the Ghost pigment drastically effects the final color. Sprayed or poured over a black base, these turn into their vibrant color. In or over a clear/white, the pigments remain white with a color tone.

PLEASE NOTE:

The color shown in this brochure may not be exact due to monitor/printing process limitations. Always test before application.

Flakes.

These are not all the colors that we offer! Please visit us on line at EyeCandyCustomzus.com for more color options.

Who doesn't love flakes?

Ranging from basic colors to shimmering multi-colored flakes, these will certainly add some life to your project. Great for automotive use. Please test in epoxy/resin projects before full application.
